

Name of the Research Center:

The Story Telling Laboratory (TSTL) at
Natural Interaction based on Language (NIL) research group

Institutional affiliation:

Universidad Complutense de Madrid (Spain)

Aims:

The Story Telling Laboratory (TSTL) is a research initiative that brings together ongoing projects that study various areas related to stories from a computational point of view: how they are constructed, how they can be explored in an interactive manner, how they are converted into text or video, how their texts are read out aloud in a convincing manner, how they can be rendered as verse, etc.

Current projects:

CENAR: Conservation of narrative structure in automatic generation of summaries
GALANTE: Generation of natural language for text with emotions
IVERNAO: Verbal instructions for navigation based on ontologies
INREDIS: Interfaces for environmental relation for people with disabilities
MILES: Models of interaction centred on language, space and computational semantics

Chairman:

Prof. Dr. Pablo Gervás

Contact (postal address, e-mail):
